1. Product Outline

ID1MB-RC-UCL/ID1MC-RC-UCL is a Camera Link and USB3.0/2.0 interfaced and 1.2Mega resolution camera module. 1.2Mega pixels CMOS sensor with diagonal length 6.0mm is utilized. Entire pixels can be read out within 1/54s.

Features

- Global Shutter CMOS sensor is utilized.
- Camera Link Base Configuration is supported.
- USB (UVC) YUV / RAW is supported.
- External trigger shutter mode is operable.
- USB Bus power, PoCL , 12pin power supply.

2. Handling Precautions

The camera must not be used for any nuclear equipment or aerospace equipment with which mechanical failure or malfunction could result in serious bodily injury or loss of human life. Our warranty does not apply to damages or defects caused by irregular and /or abnormal use of the product.

Please observe all warnings and cautions stated below.

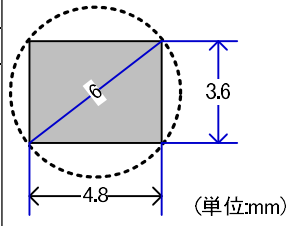

Our warranty does not apply to damages or malfunctions caused by neglecting these precautions.

Do not use or store the camera in the following extreme conditions :

- Extremely dusty or humid places.
 - Extremely hot or cold places (operating temperature 0°C to +40°C).
 - Close to generators of powerful electromagnetic radiation such as radio or TV transmitters.
 - Places subject to fluorescent light reflections.
 - Places subject to unstable (flickering, etc.) lighting conditions.
 - Places subject to strong vibration.
-
- Remove dust or dirt on the surface of the lens with a blower.
 - Do not apply excessive force or static electricity that could damage the camera.
 - Do not shoot direct images that are extremely bright (e.g., light source, sun, etc.), and when camera is not in use, put the lens cap on.
 - Confirm the mutual ground potential carefully and then connect the camera to monitors or computers. AC leaks from the connected devices may cause damages or destroy the camera.
 - Do not apply excessive voltage. (Use only the specified voltage.) Unstable or improper power supply voltage may cause damages or malfunction of the camera.
 - The voltage ripple of camera power DC +12V±10% shall be within ±50mV. Improper power supply voltage may cause noises on the video signals.
 - The rising time of camera power supply voltage shall be less than +10V, Max 60ms. Please avoid noises like chattering when rising.

4.5.LED 1

Power LED

Lights up when the camera is operational.

If the power is not supplied or the camera is broken, LED will not light up.

You can turn off the LED by communication setting.

5. Timing Chart

5.1. USB3.0 Normal Shutter Mode

After CMOS sensor is finished to expose, start to translate USB data.
USB translate timing is not fixed.

5.2. USB3.0 Fixed Trigger Shutter Mode

After CMOS sensor is finished to expose, start to translate USB data.
Frame Rate depend on trigger timing and exposure time.
USB translate timing is not fixed.

5.3.USB2.0 Normal Shutter Mode

After CMOS sensor is finished to expose, start to translate USB data.
USB translate timing is not fixed.

5.4.USB2.0 Fixed Trigger Shutter Mode

After CMOS sensor is finished to expose, start to translate USB data.
Frame Rate depend on trigger timing and exposure time.
USB translate timing is not fixed.

5.19.Fixed Trigger Shutter Mode

- This is the mode to start exposure with external input trigger signals, and set the exposure time with serial commands.
- Delay time (Exposure Time Delay) from detecting trigger edge in the camera to starting exposure is as below.

* Exposure Time Delay (A)

•USB3.0 / Camera Link	477 us	(21.5H)	*1H = 22.22 us
•USB2.0	841 us	(12.5H)	*1H = 67.34 us

Exposure Time Delay with soft trigger input is unquestionable.

- Triggers cannot be accepted even when exposing and outputting video signals.
Possible trigger input intervals : Exposure Time Delay + Exposure Time + Effective Line + 45.5H
*Trigger input during exposure time should be ignored. (Refer to the below A)

- Please set the start position : 2 x n and effective lines : 4 x n (max 962).

Start Position + Effective Line Numbers <= 962

- Frame Total Lines time

Normal Shutter Mode

= **V blanking line number (27H fixed)** + Partial Scan Effective line numbers

Fixed Trigger Shutter Mode

= Exposure Time + **V blanking line number** + Partial Scan Effective line numbers

- Frame Rate = 1 / (Total lines x Time for 1 line)

Time for 1 line = 18.69us(USB3.0/CL :Normal Mode) / 22.22us(USB3.0/CL Trigger Mode) / 67.34us(USB2.0)

- Example (Normal Shutter)

Effective Line Number	Frame Rate (Total Line Number)	
	USB3.0 / Camera Link	USB2.0
4H (min)	1725.6fps (31H)	479.03fps (31H)
320H	154.1 (347)	42.79 (347)
480H	105.5 (507)	29.28 (507)
640H	80.201 (667)	22.26 fps(667)
720H	71.61 (747)	19.87 (747)
962H (max)	54.08 (989)	15.01 (989)

- Example (Fixed Trigger Shutter) Ex Time : 1/1000s (45H)

Effective Line Number	Ex Time Line	Frame Rate (Total Line Number)	
		USB3.0 / Camera Link	USB2.0
4H (min)	45H	387.9fps (116H)	138.7fps (107H)
320H	45H	104.1 (432)	35.106 (423)
480H	45H	76.01 (592)	25.47 (583)
640H	45H	59.84 (752)	19.98 (743)
720H	45H	54.08 (832)	18.04 (823)
962H (max)	45H	41.89 (1074)	13.94 (1065)

7. UVC Extension Units (USB) Remote Communication

Camera function is changed by SDK.

8. Serial Port (Camera Link) Remote Communication

Communication Settings	
Baud Rate	: 9600bps (Initial Setting)
Data	: 8bit
Stop bit	: 1bit
Parity	: None
XON / XOFF	: No Control

- Send Command Format (Host to Camera)

If send a command, set the command and parameter between STX and ETX.

STX (02H)	Command (2byte)	Parameter(ASCII code) (20H-7FH)	ETX (03H)
--------------	--------------------	------------------------------------	--------------

- Return Command Format (Camera to Host)

Normally, a camera returns a control code which is ACK or NAK.

If return value has a text message, the message is between STX and ETX.

ACK (06H)	... Succeed
--------------	-------------

NAK (15H)	... Fail
--------------	----------

STX (02H)	command (2byte)	parameter(ASCII code) (2FH- 7FH)	ETX (03H)	... return message
--------------	--------------------	-------------------------------------	--------------	--------------------

Command	Function
SR	Set some values of resister
GR	Get some values of resister
SU	Set a user's data
GU	Get a user's data
CS	Save all configurations
CR	Restore all configurations
QM	Get a model name
QS	Get a serial number
QV	Get a firmware version
QE	Get a detail of error information

8.1.Command Specifications

1) Set some values of resister

【Command】 Set : Resister

【Return Value】

Succeed	...	ACK
Fail	...	NAK

2) Get some value of resister

【Command】 Get : Resister

【Return value】

Succeed	...	STX	A	R	(d)	(d)	...	ETX
		Data (Data length depends on the number of acquisitions)						
Fail	...	NAK						

【Remarks】

The command gets some value of register of the specified address. The number of the acquisition is between '0' and 'F' (Hexadecimal).

If appoint '0' at the address, the command send data of 16 address. If the command is omitted at the address, the command send an address.

3) Set User's data

【Command】 Set : User's data

Table No. User's data (fixed length :16byte)
(0~3)

【Return Value】

【Remarks】

The commands, sets free data on the specified register, and can use 4 tables (1 table : 16 characters).

4) Get User's data

【Command】 Get : User's data

Table No.
(0~3)

【Response】

User's data (fixed length : 16byte)

5) Save all configurations

【Command】 Configuration : Save

STX	C	S	ETX
-----	---	---	-----

【Return Value】

Succeed	...	ACK
Fail	...	NAK

6) Restore all configurations

【Command】 Configuration : Restore

STX	C	R	ETX
-----	---	---	-----

【Return Value】

Succeed	...	ACK
Fail	...	NAK

7) Get a model name

【Command】 Query : Model name

STX	Q	M	ETX
-----	---	---	-----

【Return Value】

Succeed	...	STX	R	M	(d)	(d)	...	ETX
					Model name (Fixed length: 16byte)			
Fail	...	NAK						

8) Get a serial number

【Command】 Query : Serial number

STX	Q	S	ETX
-----	---	---	-----

【Return Value】

Succeed	...	STX	R	S	(d)	(d)	...	ETX
					Serial Number(Fixed length: 8byte)			
Fail	...	NAK						

9) Get a firmware version

【Command】 Query : Version

STX	Q	V	ETX
-----	---	---	-----

【Return Value】

10) Get a detail of error information

【Command】 Query : Error

STX	Q	E	ETX
-----	---	---	-----

【Return Value】

Kind	Detail
0: No Error	00: Normal result
1: Communication Protocol Error	00: The command is undefined.
	01: The command length is more than defined.
	02: The address is undefined.
	03: The value of data is undefined.
	04: The length is more than defined.
	05: The table number is undefined.
	06: The string of user data was abnormal.
2: Internal Control Error	00: Internal control is abnormal.
	01: A read only address was written by the command.
	02: A protected address was written by the command.
	03: Out of range address was written by the command.
	04: The selected table number is abnormal.
	05: The value of the man acquisition area is abnormal.
	06: A function is not implemented.

8.2.Control Example

1) How to check trigger shutter mode. (The command gets a value from address 04)

【Send Command】

【Return value form camera】

【Receive Return Value】

The camera is working with a trigger shutter mode, because the command received a 01 from the camera.

2) How to check trigger shutter mode. (The command gets consecutive 2 bytes values from address 20)

【Send Command】

【Receive return value】

【Receive return value】

The shutter mode of camera is working +12dB, because the command received a 02FF(767) from the camera.

3) How to set partial scan mode. (The command sets 01 for address 08)

【Send Command】

【Return value form camera】

ACK

【Receive Return Value】

The command finished normally, because the command received ACK from the camera.

4) How to set 01FF for manual shutter. (The command set 01FF for address 24)

【Send Command】

【Return value form camera】

ACK

【Receive Return Value】

The command finished normally, because the command received ACK from the camera.

5) How to save configurations of a camera. (The command send CS)

【Send Command】

【Return value form camera】

ACK

【Receive Return Value】

The command finished normally, because the command received ACK from the camera.

6) How to restore the camera to initial settings. (The command send CR)

【Send Command】

【Return value form camera】

ACK

【Receive Return Value】

The command finished normally, because the command received ACK from the camera.

7) How to get detail of a communication error.

【Send Command】

Set the address invalid value

【Return value form camera】

【Receive return value】

The command finished abnormally, because the command received 'NAK' from the camera.
When the command did not finish normally, retry to send command or send to get detail of a detail error command.

【Send Command】

【Return value form camera】

Kind1 Detail 02

【Receive Return Value】

The 'GR' command accessed invalid address , because the error command received kind '1' and detail '02'.

12. Cases for Indemnity (Limited Warranty)

We shall be exempted from taking responsibility and held harmless for damage or losses incurred by the user in the following cases.

- In case damage or losses are caused by fire, earthquake, or other acts of God, acts by third party, deliberate or accidental misuse by the user, or use under extreme operating conditions.
- In case indirect, additional, consequential damages (loss of business interests, suspension of business activities) are incurred as result of malfunction or non-function of the equipment, we shall be exempted from responsibility for such damages.
- In case damage or losses are caused by failure to observe the information contained in the instructions in this product specification & operation manual.
- In case damage or losses are caused by use contrary to the instructions in this product specification & operation manual.
- In case damage or losses are caused by malfunction or other problems resulting from use of equipment or software that is not specified.
- In case damage or losses are caused by repair or modification conducted by the customer or any unauthorized third party (such as an unauthorized service representative).

13. CMOS Pixel Defect

IDULE compensates the noticeable CMOS pixel defects found at the shipping inspection prior to our shipment. On very rare occasions, however, CMOS pixel defects might be noted with time of usage of the products.

Cause of the CMOS pixel defects is the characteristic phenomenon of CMOS itself and IDULE is exempted from taking any responsibilities for them. Should you have any questions on CMOS pixel defects compensation, please contact us.

14. Product Support

When defects or malfunction of our products occur, and if you would like us to investigate on the cause and repair, please contact your distributors you purchased from to consult and coordinate.
